Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I need a faster way to assess a country’s development level” • “It is very hard to interpret raw HDI data without proper tools” • “I want to know which dimension — health, education or income — is pulling the score down”	THINKS • “If I had a prediction tool, I could save hours of manual analysis” • “I wonder if machine learning can reliably classify HDI categories” • “There must be a smarter way to compare countries than reading long UN reports”
PERSONA NAME Policy Maker / Researcher <i>(Role / User Type: HDI Data Analyst)</i>	
DOES • Downloads raw UNDP HDI datasets manually every year from official websites • Uses Excel spreadsheets to calculate and compare country indicators • Reads lengthy United Nations development reports to find HDI rankings	FEELS • Frustrated by the lack of real-time, automated HDI classification tools • Anxious about making policy recommendations without accurate, quick data • Hopeful that a predictive ML web app could simplify the entire HDI analysis process
