

Project Executable Files

Date	01 July 2026
Team ID	xxxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	NA - Runs Locally
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes

10	Demo video walkthrough (if required)	Yes
----	--------------------------------------	-----

Step 2: Folder Structure

Provide an overview of your project's file and folder structure below:

```

Human Development Index/
├── Dataset/
│   └── HDI.csv
├── Flask/
│   ├── templates/
│   │   ├── home.html
│   │   ├── indexnew.html
│   │   └── resultnew.html
│   ├── app.py
│   └── HDI.pkl
└── Training/
    └── HumDevIndex.ipynb
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://localhost:5000 (local Flask server)
Login Credentials (Demo)	Not required — open access, no authentication
Platform / Hosting Provider	Local machine — Flask built-in development server
Repository Link	https://github.com/Rohit12223/AIML-TRACK-_INTERNSHIP
Demo Video Link	https://drive.google.com/file/d/1SvnUi36nXKS2w7iKKkh6T4QuWu0EOFYG/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Python 3.8+, pip, VS Code with Python & Jupyter extensions

Step 1: Clone the repository: git clone

<https://github.com/Rohit12223/AIML-TRACK-_INTERNSHIP>

Step 2: Install dependencies: pip install numpy pandas matplotlib
scikit-learn Flask seaborn

Step 3: Download HDI.csv and place it in Dataset/ folder

Step 4: Open Training/HumDevIndex.ipynb and Run All cells to
generate HDI.pkl

Step 5: Open terminal, run: cd Flask then python app.py

Step 6: Open browser at http://127.0.0.1:5000

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Flask dev server is single-threaded, not production-optimized	Acceptable for local demo/evaluation use
2	Model trained only on 2021 UNDP data	Future scope: retrain with multi-year data
3	Out-of-range GNI values still processed	Result page shows "out of range" message instead of blocking submission
