

Problem-Solution Fit

Date	29 June 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. Customer segments Policy makers, researchers students, government officials and international organisations studying human development and global inequality	6. Customer limitations Budget: free open tool needed Devices: basic laptop/browser Internet: lightweight app required Skills: no coding knowledge needed Time: prediction under 1 minute	5. Available solutions UNDP reports: accurate but static Excel: flexible, needs expertise Our app: instant, easy, live score Cons: based on 2021 data only Pros: free, simple, browser-based
2. Problems / pains No simple ML tool to predict HDI Manual analysis is slow and complex UN reports are long static PDFs Tools need statistical expertise	9. Problem root cause No centralised ML HDI predictor UNDP data only in static PDFs Complex methodology blocks access Lack of ML tools in dev research	7. Behavior + intensity Downloads UNDP CSV monthly — high Reads 50-page PDFs — very painful Builds Excel formulas — medium Searches multiple sites — daily
3. Triggers to act Policy decision needed urgently Report deadline for researcher Student comparing countries Aid org identifying low HDI zones	10. Your solution Flask web app predicts HDI score from 4 country indicators using Linear Regression on UNDP data Live estimator + auto classification into Low / Medium / High / Very High	8. Channels of behavior ONLINE: Browser at localhost:5000 GitHub for code access Kaggle for dataset download OFFLINE:
4. Emotions before / after Before: Frustrated, overwhelmed by long complex HDI reports After: Confident and informed with instant HDI prediction and clear category result	Simple dark UI, no login needed Accessible to non-technical users Prediction result in under 2 secs	Jupyter Notebook for training VS Code for development Local Flask server to run app
